

YOUR HOME IMPROVEMENT IS IN SAFE HANDS

Hello,

We're looking forward chatting with you and discovering more about your plans for improving your home.

In our video consultation call we will share ideas with you and show you some of our recent projects that we think will give you inspiration.

Before we meet on our call, please run through this quick checklist, any details you can send us will help us to prepare the best information and advice for you.

PHOTOS OF YOUR HOME

Please email us some snapshots of your home and the areas you plan to improve. Include close ups that show any specific issues you want to discuss. For a glazed extension or conservatory, photograph outside the space where you want to build this and the existing room/s where the new space will be adjoining.

For replacement windows and doors, take outside photos of the house elevations.

TAKE SOME APPROXIMATE MEASUREMENTS

If it's a glazed extension, please measure the approximate length and width. For replacement windows and doors, just follow our approximate measuring guide below.

These measurements will help us to advise you on designs and to prepare your quote.

SHOW US YOUR DREAM

If you've been inspired by photos of homes and finished projects or have details of products you like the look of, just show them to us when we get together on our call.

SEND US ANY PLANS FOR YOUR PROJECT

If you've got any plans drawn up already, we'd love to see them so we can see your vision. You can share them with us on our call or send them to us.

HOW TO TAKE APPROXIMATE MEASUREMENTS OF WINDOWS AND DOORS

- ✓ Take measurements from the outside where possible, for upstairs inside is fine.
- ✓ Measurements should be in either millimetres or centimetres.
- ✓ Measure the overall width and height of the opening that the window or door fits into. This will be from wall to wall, or wall to floor level when measuring the height of a door.
- ✓ For a bay window, from the inside measure the overall width and height from wall to wall.
- ✓ Please send us snapshots of the windows and doors as well.
- ✓ If you are measuring a door, include any sidelights or a toplight in your overall measurements.
